TABLETS
ANACIN-3® (III)
ACETAMINOPHEN
with Codeine

Brief Summary ***(For full prescribing information see package insert.)***
Description: Each Tablet Contains:
Acetaminophen 325 mg, and Codeine Phosphate*, 15 mg
Acetaminophen 300 mg, and Codeine Phosphate*, 30 mg
Acetaminophen 300 mg, and Codeine Phosphate*, 60 mg
*WARNING: May be habit forming
Contraindications: Hypersensitivity to acetaminophen or codeine.
Warnings: Drug Dependence: Codeine can produce drug dependence of the morphine type, and may be abused. Dependence and tolerance may develop upon repeated administration. Prescribe and administer with the same degree of caution appropriate to the use of other oral narcotic medications. Subject to the Federal Controlled Substances Act (Schedule III).
Precautions: *Head injury and increased intracranial pressure:* The respiratory depressant effects of narcotics and their capacity to elevate cerebrospinal fluid pressure may be markedly exaggerated in the presence of head injury, other intracranial lesions or a preexisting increase in intracranial pressure. Narcotics produce adverse reactions which may obscure the clinical course of patients with head injuries.
Acute abdominal conditions: Codeine or other narcotics may obscure the diagnosis or clinical course in patients with acute abdominal conditions.
Special risk patients: Administer with caution to certain patients such as the elderly or debilitated, and those with severe impairment of hepatic or renal function, hypothyroidism, Addison's disease, and prostatic hypertrophy or urethral stricture.
Information for Patients: Codeine may impair the mental and/or physical abilities required for the performance of potentially hazardous tasks such as driving a car or operating machinery. The patient taking this drug should be cautioned accordingly.
Drug Interactions: Patients receiving other narcotic analgesics, antipsychotics, antianxiety, or other CNS depressants (including alcohol) concomitantly with acetaminophen and codeine may exhibit additive CNS depression due to the codeine component. When such therapy is contemplated, the dose of one or both agents should be reduced.
The use of MAO inhibitors or tricyclic antidepressants with codeine preparations may increase the effect of either the antidepressant or codeine.
The concurrent use of anticholinergics with codeine may produce paralytic ileus.
Usage in Pregnancy: Safe use in pregnancy has not been established relative to possible adverse effects on fetal development. Therefore, acetaminophen and codeine should not be used in pregnant women unless, in the judgment of the physician, the potential benefits outweigh the possible hazards.
Nursing Mothers: It is not known whether the components of this drug are excreted in human milk. Because many drugs are excreted in human milk, caution should be exercised when acetaminophen and codeine are administered to a nursing woman.
Adverse Reactions: Most frequently: Lightheadedness, dizziness, sedation, shortness of breath, nausea and vomiting. More prominent in ambulatory than in nonambulatory patients, and some of these adverse reactions may be alleviated if the patient lies down. Others: Euphoria, dysphoria, constipation and pruritus.
Dosage and Administration: Dosage should be adjusted according to severity of pain and response of the patient. However, it should be kept in mind that tolerance to codeine can develop with continued use and that the incidence of untoward effects is dose related. This product is inappropriate even in high doses for severe or intractable pain. Adult doses of codeine higher than 60 mg fail to give commensurate relief of pain but merely prolong analgesia and are associated with an appreciably increased incidence of undesirable side effects. Equivalently high doses in children would have similar effects.
Adults: **Codeine**—15-30 mg (for mild to moderate pain)
60 mg (for moderate to moderately severe pain)
Acetaminophen—300-600 mg
Children: **Codeine**—500 mcg/kg
Doses can be repeated up to every 4 hours.
Full directions for use should be consulted prior to administering or prescribing.

tailored for action, designed for comfort

BARRIER* Surgical Gown, made with moisture-repellent FABRIC 450*, is cool, conformable and rustle-free. Softer than cotton, FABRIC 450* resists moisture strike-through and resultant bacterial migration. It is well documented that wet cotton facilitates bacterial migration[1,2] whereas single-use gowns reduce the risk of bacterial and particle migration, thereby reducing the rate of postoperative infection.[3]

BARRIER Surgical Gown withstands the stress of today's surgical procedures and gives you maximum comfort and freedom of movement.
